

Arrow Gold RTK GNSS Receiver

<https://eos-gnss.com/products/hardware/arrow-gold>

Description: Affordable Survey-Grade GNSS Receiver offering RTK Precision – The Arrow Gold® is the first high-accuracy Bluetooth® GNSS receiver on the market to implement all four global GNSS constellations (GPS, GLONASS, Galileo, BeiDou), triple frequency, and satellite-based RTK augmentation on any iOS, Android, and Windows devices. Moreover, the new Arrow Gold+™ (plus model) adds full-band support for all GNSS signals including Galileo's new, free High-Accuracy Service (HAS). Both the standard Arrow Gold® and plus-model Arrow Gold+™ receivers work with all apps that run on iOS, Android, and Windows.

Uses: Collect high accuracy locations and can be used with mobile apps such as Survey123, Field Maps, and Global Mapper.

Maintenance: The unit comes with a case for protection when not in use. The batteries are internal and rechargeable.
